190 Real-World Use Cases

Research Methodology

Executive Summary

This thematic analysis examines how change management professionals are currently utilizing AI tools and technologies in their practice. The analysis identified **10 primary themes** across **276 detailed responses**, revealing that change management practitioners are primarily leveraging AI for communication creation, content generation, and analytical tasks that enhance their core professional activities.

Themes and Sub-themes

This research revealed a series of themes and sub-themes related to the use of AI in change management work. The table below summarizes these insights, with the rest of this report providing additional details for each theme.

Top 10 Use Cases for AI in Change Management

1. Communication Creation & Drafting

Primary Use Case

Change management professionals are leveraging AI most extensively for creating and drafting various forms of communication materials. This represents the largest single application area.

Sub-themes:

- **Initial Draft Creation:** Using AI to overcome writer's block and generate first drafts
- **Targeted Messaging:** Crafting communications for specific audiences and stakeholder groups
- **Multichannel Communication:** Adapting messages for different communication channels
- **Personalized Communication:** Creating customized messages based on recipient data

Supporting Quotes:

"I am using it to help me write communications, to give me the base then go back and edit and review so it fits the organisational language/tone and is correct. But this saves me significant time."

"Using AI to deliver the necessary information to individuals based on their personal data at the moment they need it can be highly effective in change management projects with a broad target audience. By doing so, personalized communication can be achieved, delivering more specific and engaging messages to the target audience."

"Quickly drafting communications, breaking complex topics into smaller/more manageable chunks, detecting key themes in content, organizing thoughts, and for gut-checks on tone of messaging."

"To craft communications, come up with resistance management techniques, as well as to brainstorm ADKAR blueprint activities to help various stakeholder groups move through their ADKAR journey."

"At this time I am using to start communications...always easier to edit than build 100% from scratch"

2. Content Generation & Creation

Secondary Use Case

Professionals are using AI to generate various types of content beyond traditional communications, including presentations, documents, templates, and multimedia materials.

Sub-themes:

- **Presentation Development:** Creating PowerPoint slides and presentation materials
- **Template Creation:** Developing reusable frameworks and templates
- **Visual Content:** Generating images, videos, and graphics
- **Document Creation:** Producing formal documents and policies

Supporting Quotes:

"Create outline of a Change Management Plan, helping identify key components of engagement strategy, defining measures of success, setting up outline of training material, prepare an engagement plan prior to a go-live, generate slides, create announcements and other general communications, etc."

"I use it to create user personas, write texts, repurpose written text for other channels like podcasts and yammer posts, I analyze and forecast individual behaviours of impacted teams, I create explainer videos with ai, and I use it in powerpoint."

"Only to develop some communication products like videos with avatars, or disruptive ways to present information."

"Create ideal, pictures and text"

3. Data Analysis & Insights

Analytical Applications

AI is being utilized to analyze qualitative and quantitative data, extract insights, and identify patterns that inform change management decisions.

Sub-themes:

- **Survey Analysis:** Processing and analyzing survey responses and feedback
- **Theme Identification:** Extracting key themes from large datasets
- **Stakeholder Analysis:** Understanding stakeholder sentiment and behaviors
- **Predictive Analytics:** Forecasting change outcomes and risks

Supporting Quotes:

"Template creation for communication; Data analyst for survey results; Editor for communication; Coach for change management"

"Using ChatGPT to distill key themes from stakeholder interviews, improve grammar, change voicing in comms to suit specific audiences."

"Thematic analysis of survey data Research various change management topics (LLMs are much better than web searches)"

"I also use it to summarize (anonymized) survey responses, sometimes 'live' in workshops. For example if I get 20 responses to the 4Ps exercise, I'll produce a quick summary using AI (potentially in a coffee break) then present back after the break 'this is what you said', 'here are areas of divergence and congruence' - lets discuss it more"

4. Plan Development & Strategy

Strategic Planning

AI tools are supporting the development of change management plans, strategies, and frameworks by providing structure and strategic guidance.

Sub-themes:

- **Change Management Planning:** Creating comprehensive change management plans
- **Strategic Framework Development:** Building strategic approaches and methodologies
- **Risk Assessment:** Identifying and planning for potential risks
- **Implementation Planning:** Developing detailed implementation strategies

Supporting Quotes:

"I use it to identify the main steps and the overall framework for the change I want to bring about, and to identify the potential risks in a broader framework."

"Outline for change management plan"

"Primarily as a confirmation tool. I create my change statement, change plan, communication plan, adoption plan, training plan and ask AI to confirm my approach."

"Write comms plan, help create a structure and governance framework"

5. Research & Knowledge Discovery

Information Gathering

Professionals are leveraging AI for research activities, knowledge acquisition, and staying current with industry trends and best practices.

Sub-themes:

- **Best Practices Research:** Discovering industry standards and proven approaches
- **Concept Definition:** Understanding complex change management concepts
- **Industry Intelligence:** Gathering sector-specific information
- **Benchmarking:** Comparing approaches and outcomes

Supporting Quotes:

"I can ask for definitions of concepts in change management, culture, communication, the best way to market in my environment, etc."

"Gathering industry specific information (current) and projected (future) evolutions within the industry. Example: BioPharmacology"

"I use ChatGPT in a number of ways; I use it to summarize documents. I use it conversationally to flesh out ideas and concepts. I use it to perform some horizontal scanning of best practices."

"Developing communications and training outlines, streamlining communications, gather market intelligence (e.g., gather industry-specific challenges)"

6. Quality Enhancement & Editing

Content Refinement

AI is being used to improve the quality of existing work through editing, refinement, and enhancement of content.

Sub-themes:

- **Grammar and Style Checking:** Improving language quality and consistency
- **Tone Adjustment:** Modifying communication tone for different audiences
- **Content Refinement:** Enhancing clarity and effectiveness of messages
- **Proofreading:** Checking for errors and inconsistencies

Supporting Quotes:

"Communication refinement; Grammatical and flow improvement. Sound boarding High level research"

"To refine wording for communication to ensure it is at the right level, tone and style. Also, I reword documents where required or look for information from others that I can springboard off."

"Mainly use the generative AI tools to help validate writing communications."

"I occasionally use tools like Chat GPT to help check / edit communications I have drafted. For example, posting communications I have drafted into Chat GPT and asking it to write it more / less formally."

7. Brainstorming & Ideation

Creative Problem Solving

AI serves as a creative partner for generating ideas, exploring possibilities, and overcoming creative blocks in change management work.

Sub-themes:

- **Creative Idea Generation:** Developing innovative approaches and solutions
- **Problem-Solving Support:** Finding new ways to address challenges
- **Hypothesis Testing:** Exploring theoretical connections and possibilities
- **Creative Communication:** Developing engaging and memorable messaging

Supporting Quotes:

"To develop ideas and concepts for various aspects of change management especially when I get stuck for ideas."

"Brainstorming for new ideas and using it almost like a 'simulator.' For example, in coming up with new ideas on who to partner with and what such partnership could look like."

"Tried chat GPT to find interesting ways to message change efforts and WIIFM. For example, we used ChatGPT to create a message in the format of a Dr. Seuss poem to entice people to participate in our Microsoft 365 Implementation."

"I use generative AI for idea generation. I like to have it ask me questions to develop a method or to enhance my thinking work."

8. Training & Learning Materials

Educational Content Development

AI is supporting the creation of training materials, educational content, and learning experiences for change management initiatives.

Sub-themes:

- **Training Content Creation:** Developing educational materials and curricula
- **Workshop Design:** Planning and structuring learning experiences
- **Learning Artifact Development:** Creating supporting materials for training
- **Interactive Learning:** Developing engaging educational experiences

Supporting Quotes:

"ChatGPT to summarize or draft communications. Envision using Synthesia to create learning artifacts."

"I use the chatgpt model to create questionnaires for surveys. To create and design intervention activities, e.g. creating a team-building activity workshop for executives."

"I am implementing an inhouse built chatbot to our client for personalised training and to answer Q&A"

"Support Communications, Brainstorming Initiative, Designing Workshops"

9. Stakeholder Engagement & Support

Interactive Support Systems

AI is being deployed to create interactive systems that support stakeholders throughout the change process.

Sub-themes:

- **Chatbot Implementation:** Deploying AI-powered support systems
- **FAQ Systems:** Creating intelligent question-and-answer systems
- **Personalized Support:** Providing tailored assistance to different user groups
- **Real-time Assistance:** Offering immediate support during change processes

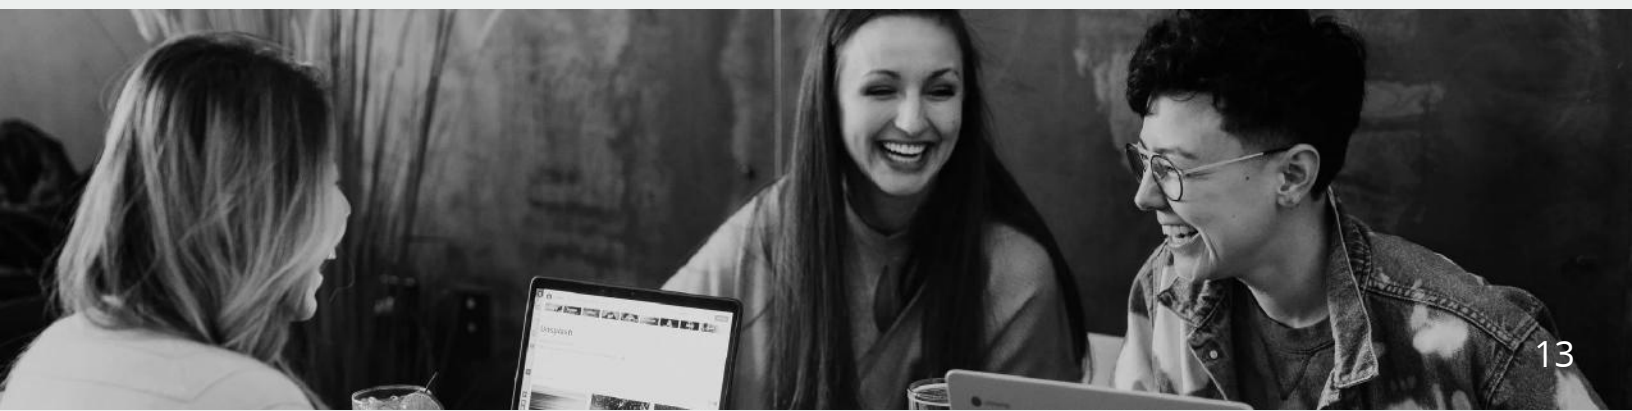

Supporting Quotes:

"Bots for FAQs and links to resources."

"Moveworks AI serving as a super FAQ (we fed it info) to answer questions about the transformation process as well as the new enterprise apps."

"I am currently working on adoption of one of the AI FAQ bot in my organization"

"Developed a knowledge-based AI Assistant/chatbot to support users of a new solution navigate their way around the solution without the need for a human interaction."

10. Process Automation & Efficiency

Workflow Optimization

AI is being utilized to automate routine tasks and improve operational efficiency in change management processes.

Sub-themes:

- **Task Automation:** Automating repetitive administrative tasks
- **Workflow Streamlining:** Optimizing existing processes
- **Efficiency Enhancement:** Reducing time and effort for routine activities
- **Process Optimization:** Improving overall operational effectiveness

Supporting Quotes:

"Predictive analytics tools, automating processes, and creating and updating FAQs"

"Complete automation"

"COMMs Automate manual tasks" [using technology to automate communication tasks and workflows]

"I am using for Communication and Daily repetitive tasks."

Key Insights

1. Communication-Centric Adoption

The overwhelming focus on communication-related applications (91 total mentions across communication creation, quality enhancement, and stakeholder engagement) indicates that change management professionals view AI primarily as a tool to enhance their communication effectiveness.

2. Efficiency-Driven Implementation

Professionals consistently emphasize time-saving benefits, with many noting that AI helps them work faster and more efficiently while maintaining quality.

3. Human-AI Collaboration

The responses reveal a collaborative approach where AI serves as a starting point or assistant, with professionals maintaining control over final outputs and decisions.

4. Emerging Sophistication

While basic applications dominate, some professionals are exploring advanced uses like predictive analytics, sentiment analysis, and automated decision-support systems.

5. Tool Accessibility

ChatGPT emerges as the dominant AI tool mentioned, though professionals also reference specialized tools like Synthesia, Moveworks, and various Microsoft AI integrations.

Conclusion

The thematic analysis reveals that **change management professionals are in the early stages of AI adoption, primarily leveraging these technologies to enhance traditional change management activities rather than fundamentally transforming their practice.** The focus on communication and content creation suggests that AI is being used to address one of the most time-intensive aspects of change management work, while the emerging applications in data analysis and stakeholder support point toward more sophisticated future uses.

The data indicates a pragmatic, efficiency-focused approach to AI adoption, with professionals **seeking to maintain the human-centered nature of change management while leveraging AI to enhance their effectiveness and reach.**

Quick Reference

190 Real-World Use Cases for AI in Change Management

1. COMMUNICATION CREATION & DRAFTING

Initial Draft Creation

- Generate initial drafts of communications and presentations
- Start communications as foundation for editing
- Create first drafts of emails and formal communications
- Support articulation during writer's block

Targeted Messaging

- Create targeted communications for specific audiences
- Modify voicing and tone to suit different stakeholder groups
- Create personalized messages based on individual data
- Generate personalized messages based on employee system traces/data
- Deliver information to individuals at optimal timing

Multichannel Communication

- Repurpose content across channels (podcasts, Yammer, slides, images, text)
- Turn content into different audience formats
- Create communication content for different channels

Specialized Communications

- Create themed messaging (Dr. Seuss poem for Microsoft 365 adoption)
- Generate creative headlines and marketing phrases
- Create change announcements and notifications
- Develop WIIFM (What's In It For Me) messaging
- Create sponsor messages and executive talking points
- Draft sponsor messages and talking points
- Generate email signatures and professional messaging
- Create one-pagers and executive summaries

2. CONTENT GENERATION AND CREATION

Presentation Development

- Create PowerPoint presentations and slide materials
- Generate slide content and presentation materials
- Develop presentations for internal and external audiences
- Generate presentation case studies

Template & Framework Creation

- Generate straw-man templates and frameworks
- Create templates that don't exist in CM toolkit
- Create communication templates
- Create general communications templates
- Develop reusable frameworks

Document Creation

- Create Change Management Plan outlines
- Create policy document backbones and roadmaps
- Generate job descriptions for change roles
- Create newsletters and frameworks
- Create impact statements for strategy pitches

Visual & Multimedia Content

- Create explainer videos and custom images
- Create learning videos using Synthesia
- Create video communications using Lumen5
- Create videos with AI avatars for presentations
- Create sizzle videos with AI voice-overs
- Generate voice-over recordings using leader's voice
- Create custom images using Adobe Express AI

3. DATA ANALYSIS & INSIGHTS

Survey & Feedback Analysis

- Conduct thematic analysis of survey data
- Analyze key themes in open comments
- Summarize survey responses live in workshops
- Summarize 4Ps exercise responses live in workshops
- Aggregate data analysis
- Analyze survey results data

Stakeholder Analysis

- Analyze and forecast individual behaviors of impacted teams
- Forecast individual team member behaviors
- Distill key themes from stakeholder interviews
- Process stakeholder Excel worksheets to summarize trends
- Conduct stakeholder sentiment analysis
- Identify areas of divergence and congruence in stakeholder feedback

Advanced Analytics

- Use predictive analytics for change outcome forecasting
- Analyze employee sentiment through natural language processing
- Conduct data trend analysis in dashboards
- Generate automated commentary for Qlik dashboards
- Generate heat maps for impact analysis
- Analyze ADKAR and PCT assessment scores

Content Analysis

- Detect and consolidate key themes in qualitative content
- Organize themes from various data sources
- Breaking complex topics into manageable chunks
- Extract insights from data

Quick Reference

190 Real-World Use Cases for AI in Change Management

4. PLAN DEVELOPMENT & STRATEGY

Change Management Planning

- Create Change Management Plan outlines
- Develop communication, adoption, and training plans
- Build change management playbooks
- Create next step action plans

Strategic Framework Development

- Create structure and governance frameworks
- Develop strategic approaches and define success measures
- Generate measures of success frameworks
- Use AI as confirmation tool for change plans

Risk & Impact Assessment

- Conduct impact assessments and risk evaluations
- Generate comprehensive risk lists for projects
- Identify potential risks broadly
- Create resistance mitigation plans

Implementation Planning

- Prepare engagement plans prior to go-live
- Create action plans, activity calendars, and implementation timelines
- Develop activity calendars using PROSCI and ADKAR frameworks
- Conduct simulation and scenario planning exercises

Specialized Planning

- Define hypercare strategies for post-implementation support
- Identify cultural shifts needed for technology adoption
- Generate unexpected correlations between change theories
- Accelerate hypothesis testing for change approaches

5. RESEARCH & KNOWLEDGE DISCOVERY

Best Practices Research

- Conduct horizontal scanning of best practices
- Research change management topics and solutions
- Gather market intelligence
- Research and explore using Humata AI

Concept & Theory Research

- Research definitions of change management concepts
- Understand complex business concepts and ideas
- Test relationships between change theories (self-determination theory and ADKAR)
- Generate unexpected correlations between change theories

Industry Intelligence

- Gather industry-specific information and projections
- Collect industry challenges and technical topics
- Gather biopharmacology industry-specific projections
- Create knowledge summaries of new topics

Benchmarking & Validation

- Develop personas and conduct benchmarking studies
- Compare approaches, outcomes, and industry standards
- Generate concept validation
- Support benchmarking activities

6. QUALITY ENHANCEMENT & EDITING

Grammar & Language

- Improve grammar, flow, and language quality
- Answer grammatical questions quickly
- Check and edit communications

Tone & Style Adjustment

- Conduct tone checks and adjust messaging level
- Refine wording for appropriate style and formality
- Create organizational language and tone guidelines

Content Refinement

- Rewrite and rephrase content for clarity
- Make communications more succinct and impactful
- Refine copy in communications and decks
- Filter presentations for improvements

Review & Validation

- Validate communications and confirm methodologies
- Review and wordsmith content for quality assurance
- Create awareness communications with AI review
- Edit communications for clarity

7. BRAINSTORMING & IDEATION

Creative Problem Solving

- Brainstorm tactics for organizational challenges
- Generate ideas for overcoming barriers
- Develop resistance management techniques
- Generate ideas for barrier point tactics

Innovation & Creativity

- Create OCM board games for engagement
- Find interesting change messaging approaches
- Create creative OCM approaches
- Create disruptive information presentation methods

Partnership & Collaboration

- Generate partnership opportunities and collaboration approaches
- Explore unexpected correlations and relationships
- Support initiative brainstorming
- Design intervention activities for executives

Communication Creativity

- Find innovative ways to message change efforts
- Create analogies for presentations and speaking events
- Generate creative headlines and messaging strategies
- Brainstorm creative headlines

Quick Reference

190 Real-World Use Cases for AI in Change Management

8. TRAINING & LEARNING MATERIALS

Content Development

- Create learning artifacts using tools like Synthesia
- Develop training outlines, content, and scripts
- Generate training guides using ScribeAI
- Create micro-learning modules for change training

Workshop & Session Design

- Design workshops and team-building activities for executives
- Plan workshop structures and content
- Design workshop activities
- Create intervention activities for executives

Educational Resources

- Create case studies for educational assignments
- Create fictional case studies for specific industries
- Generate knowledge articles for change support
- Develop training course listings and catalogs

Interactive Learning

- Implement chatbots for personalized training
- Create interactive learning experiences and AI assistants
- Provide personalized training
- Answer training Q&A

9. STAKEHOLDER ENGAGEMENT & SUPPORT

Chatbot & AI Assistant Implementation

- Deploy FAQ bots with organizational knowledge
- Deploy Moveworks AI as organizational FAQ system
- Implement in-house chatbots for client support
- Create knowledge-based AI assistants

Real-time Support Systems

- Answer questions about transformation processes
- Provide Q&A support and guide users through applications
- Guide users through Salesforce applications using AI
- Offer immediate assistance during change

Personalized Assistance

- Deliver personalized training and customized content
- Tailor support to different user groups
- Provide links to central repositories based on user queries
- Create user personas for change planning

Engagement Activities

- Support stakeholder feedback collection
- Develop change champion charters
- Generate ADKAR blueprint activities for stakeholder groups
- Create questionnaires for change surveys

10. PROCESS AUTOMATION & EFFICIENCY

Task & Workflow Automation

- Automate manual and repetitive daily tasks
- Automate workflows and streamline communications
- Automate repetitive tasks using Microsoft Power Automate
- Implement RPA (Robotic Process Automation) for efficiency gains

Documentation & Reporting

- Automate meeting notes, summaries, and reports
- Summarize meetings using AI note-taking tools (FireFlies, ReadAI)
- Generate automatic commentary for dashboards
- Track action items from team meetings

Administrative Efficiency

- Capture meeting tasks and actions automatically
- Set up automated reminders and task tracking
- Automate creation of governance packs
- Develop test scripts for ERP implementations

Specialized Automation

- Use EPIC AI for EMR management in healthcare change
- Script user behaviors using digital adoption platforms
- Generate mind maps for project planning
- Organize travel plans for change initiatives

BONUS SECTION: ADVANCED APPLICATIONS & TOOLS

Specialized AI Tools

- Use Microsoft Copilot for research and content creation
- Use Jasper AI for strategy development and content
- Use QuillBot for email communication enhancement
- Translate texts using DeepL AI translation

Industry-Specific Applications

- Use EPIC AI for EMR management in healthcare change
- Gather biopharmacology industry-specific projections
- Create multilingual translations for global projects
- Generate change readiness surveys

Creative & Innovative Uses

- Create themed messaging (Dr. Seuss poem format)
- Generate voice-over recordings using leader's voice
- Create 'change muscle' skills for meeting effectiveness
- Help with natural speaking vs. narration challenges

Research Methodology

Study Overview

This report examines responses to the survey, "The AI Effect: Transformative Impacts of Artificial Intelligence in Change Management", which investigated how change management professionals are currently utilizing AI tools and technologies in their practice. The study represents one of the earliest comprehensive examinations of AI adoption in the change management field.

While the study addressed multiple topics, this summary report specifically addresses the thematic analysis of responses to the question: **"How are you currently using AI tools and technologies in your change management practice? Please describe specific use cases."**

Of the 729 total participants, **276 (37.9%)** provided detailed use case descriptions, ranging from brief single-word descriptions to detailed multi-paragraph explanations of how they are integrating AI into their work.

STUDY PARTICIPATION INVITATION

Data collection for this study began in late 2023 and has continued since as part of a longitudinal study of AI use in change management. Response rates peaked during September 2023 and January 2024. We expect trends and themes in AI use to shift over time. To add your experience to the longitudinal study, please use the QR code to the right, or visit <https://ncv.microsoft.com/QoGD52IAcl>. The survey takes 8-10 minutes to complete.

Partnering for Change Done Right The Prosci Advantage

This research underscores both the transformative potential of AI and the critical importance of navigating the human side of implementation to realize that potential. While many organizations provide change management as an add-on to their implementation, at Prosci, getting change done right is our purpose and passion. That's why Prosci is uniquely positioned to help you on this journey. As a global leader in change management, Prosci offers:

- Best practices and proven methodologies from years of research and experience
- Deep expertise in the people side of change and technology adoption
- Customized solutions to address your unique adoption goals and challenges
- A track record of driving successful transformation in organizations around the world

By partnering with Prosci, you gain access to the expert guidance and proven strategies needed to proactively address the human side of AI and position your organization for transformative success.

Are you ready to elevate your AI initiative, achieve game-changing AI adoption, and drive business outcomes that achieve your vision? Contact Prosci today to explore how our proven methodologies and expertise can empower your organization to realize the full value of AI.

To learn more, visit <https://www.prosci.com/ai-change-management> or email solutions@prosci.com to schedule a free consultation. Together, we can help you deliver AI transformation done right.
