NorPine Bank: AI Adoption

Case Study – Part 1

Company Overview

NorPine Bank (NorPine), a leading financial institution with over 50 years in business, has built a reputation for providing exceptional banking services to millions of customers worldwide. With a robust network of branches and a strong digital presence, NorPine offers a wide range of financial products and services, including personal and business banking, investment services and wealth management. As the financial landscape evolves, NorPine recognizes the need to stay ahead of the curve by embracing AI-powered technologies.

Key Information

- Headquarters: Toronto, Ontario, Canada
- International Offices: Singapore, New York, Seattle, London
- Company Type: Public
- Total Employees: 25,000
- Year of Founding: 1971
- Primary Industry: Financial Services

NorPine's Core Values

Trust and Integrity	Building long-lasting relationships with customers based on trust and transparency.
Innovation	Leveraging cutting-edge technologies to provide superior banking experiences.
Community Focus	Supporting local and diverse communities and contributing to their growth and development.

AI-Powered Application Deployment and Adoption Project

NorPine is deploying an Artificial Intelligence (AI)-powered application for all desk-based and frontline employees. The intent is to leverage AI technology to enhance productivity, improve customer service experiences and strengthen compliance and security practices worldwide. The project centers around AI-driven Excellence and is called NorAI. It will be piloted within the Client Services Organization (CSO). This change is part of a larger initiative to digitally transform workflows across all departments globally. CSO departments within the Toronto headquarters and Singapore location will kick off the project.

The decision to implement the AI-powered application stems from a need to streamline processes, reduce operational costs, retain and attract customers and address growing cybersecurity risks within the financial sector.

In the highly competitive financial services industry, delivering exceptional customer experience while maintaining operational efficiency and compliance is critical to success. For NorPine, customer-driven, enterprise-wide operational excellence is a key priority, and the Client Services Organization plays a vital role in achieving this goal. However, several challenges have emerged that hinder the department's ability to meet rising customer expectations.

NorPine Bank: AI Adoption

Case Study – Part 1

Problem Definition

The need for change arose from decreasing Customer Satisfaction (CSAT) scores, increasing customer attrition, growing inefficiencies in operations, increasing costs, and expanding customer expectations in financial services. The financial industry is also experiencing a rapid shift toward AI-driven digital transformation and other banks have already implemented AI solutions. NorPine leadership sees AI as a critical enabler of its strategic initiatives. NorPine must act now or risk falling behind – inaction is not an option.

While promising significant benefits, AI deployment also presents challenges common to large-scale technology implementations in highly regulated industries, including managing cybersecurity risks, ensuring compliance and overcoming resistance to change among employees.

NorPine's core values rely on customer relationships; the first deployment of the AI-powered application will include departments within the CSO. Deploying AI in Client Services first aligns with the bank's focus on trust and transparency, long-standing customer relationships and ensuring that the frontline of customer interaction is strengthened. Improving customer experience for client retention and attraction is top of mind for the bank.

NorPine's AI-powered application will transform the business by integrating AI-driven insights, automation and real-time compliance support. NorPine aims to improve customer service experiences, reinforce trust through secure, transparent interactions and enhance productivity while aligning to its core values.

Benefits

Deploying an AI-powered application for NorPine's CSO will provide:

- **Enhanced Customer Experiences:** Personalized interactions, AI-driven recommendations, multilingual support, improved journey mapping and real-time sentiment analysis for frontline employees.
 - **Refined Professional Communication:** AI-assisted drafting for clear, consistent and personalized emails, improving speed and quality in local languages.
 - **Increased Revenue and Loyalty:** Tailored products and services to boost customer loyalty and long-term engagement.
 - **Higher CSAT and Customer Growth:** Improved retention, increased satisfaction scores and new customer acquisition.
 - **Smarter Reporting and Dashboards:** Real-time insights on compliance, workflow optimization, service metrics, customer trends and financial forecasts.
 - **Greater Efficiency and Reduced Workload:** AI-automated routine tasks, quicker responses and enhanced task prioritization.
- Higher Job Satisfaction, Inclusion and Work-Life Balance:** Reduced stress, fewer tedious tasks, greater fulfillment from meaningful work and feeling more included.

By addressing these key areas, deployment of the AI-powered application will not only improve customer experience and day-to-day operations, but it will also align NorPine with its long-term strategic goals.

NorPine Bank: AI Adoption

Case Study – Part 1

NorAI Change Management

You are the change practitioner for the first deployment of the AI-powered application. This project will directly impact all departments across NorPine's CSO. NorPine will begin the rollout at headquarters in Toronto as well as the smaller regional CSO in Singapore. The rollout will run over a nine-month period. There will be a pause following the first deployment in Toronto and Singapore on wins and lessons learned before completing the deployment with the remaining locations. Capitalizing on the differences between Toronto and Singapore, key learnings will include the cultural considerations and differences needed for the full global rollout.

Your role is pivotal in ensuring the success of this transformative project. The deployment of the AI application introduces significant shifts in how employees perform their daily tasks, collaborate across teams and interact with external stakeholders and customers. This requires a structured and intentional change management approach.

NorPine has recognized that successful adoption of the AI-powered application hinges on addressing the people side of change. Early sentiment has revealed a range of challenges, including employee resistance to AI-driven tools, uncertainty about role adjustments, and concerns about system security and reliability. To mitigate these risks, a comprehensive change management strategy has been developed, leveraging the Prosci methodology.

Primary stakeholders

Project Role	Name	Job Title
Primary Sponsor	Judith Mortenson	Chief Technology Officer
Sponsor Coalition	Amara Patel	Chief Executive Officer
	Liam O'Connor	Chief Data and Security Officer
	Julia Lee	Chief Information Security Officer
	Louis Mohn	Principal Project Manager, IT

Day 1

Prosci Practitioner Program AI
Adoption Focused Case Study

Prosci[®]

Phase 1 – Prepare Approach

As the change practitioner, you are working with the project team focused on delivering the AI-powered application. You joined the team a few weeks after the project was underway and began developing a customized and scaled change management strategy for the adoption of the AI-powered application. The assigned project manager, Louis, has not worked with change practitioners in the past.

One of your first engagement activities was to conduct a project health check assessment using the Prosci Change Triangle (PCT). You involved the primary sponsor, sponsor coalition and project manager in the assessment. This established a baseline measure of project health early in the project lifecycle.

Initial PCT Assessment Results

Score Interpretation:

-  10-19: High risk/threat – needs immediate action
-  20-24: Alert/possible risk – needs further investigation
-  25-30: Strength – should be leveraged and maintained

The scores for all four aspects of the PCT were low. At this early stage in the project lifecycle, your primary concern was the lack of a clear and commonly understood definition of success for NorAI.

To address the first concern, you facilitated a series of discussions involving the sponsor, project team and other key stakeholders, which produced the following definition of the 4 P's for NorAI: Project, Purpose, Particulars and People.

NorPine Bank: AI Adoption

Case Study – Part 1

4 P's: Connect People to Success

Project: What is the project?	Purpose: Why are we changing?	Particulars: What are we changing?	People: Who will be changing?
AI-driven Excellence (NorAI)	To leverage artificial intelligence to enhance customer service, improve operational efficiency, and foster a culture of innovation. This will result in driving greater satisfaction and loyalty among our clients. Project Objectives • Reduce manual workload by 25% • All customer inquiries are categorized and tracked, improving response times and issue resolution by 30% • Provide AI-driven coaching to 100% of frontline employees Organizational Benefits • Increase operational efficiency by reducing routine task time by 30% • Increase revenue from AI-driven product recommendations by 10% • Improve customer wait times from 5 minutes to under 2 minutes • Improve internal fraud detection accuracy from 85% to 95% • Boost customer satisfaction (CSAT) scores from 4.2 to 4.5 (out of 5) • Expand multilingual customer support, covering 80% of key customer languages	• Processes – Streamlining • Systems – Deploying an AI-application • Tools – New and updated tools • Job roles – Adjustments due to AI tools • Critical behaviors – Adopting AI • Mindsets/Attitudes /Beliefs – Willingness to engage with AI-driven practices • Performance reviews – New Key Performance Indicators (KPIs)	First Deployment: Toronto Client Services (2,500 employees) • Frontline Support (Branch and Teller Operations) (600) • Contact Centers (Phone and Digital) (600) • Wealth Services (400) • Commercial Banking (400) • Private Banking (250) • Customer Experience (250) Singapore Client Services (400 employees) • Frontline Support (150) • Contact Centers (150) • Wealth Services (50) • Commercial Banking (50)

NorPine Bank: AI Adoption

Case Study – Part 1

Phase 1 – Prepare Approach: Observations

The change management approach for NorAI focuses on ensuring employees at all levels are informed, engaged and equipped to adopt the new application effectively. Key components of the strategy include:

- **Building Awareness and Desire:** Clear, consistent communication through town halls, team meetings, newsletters, enterprise communication platforms and leadership messages to explain the purpose and benefits of the AI-powered application.
- **Equipping Teams for Change:** Customized training programs tailored to the needs of different departments and role personas, emphasizing relatable, real-world use cases and firsthand practice in the AI-powered application. Leverage a change agent network.
- **Securing Sponsorship:** Regular check-ins with the primary sponsor and coalition to reinforce alignment and maintain active and visible executive sponsorship.
- **Addressing Resistance:** Listening sessions and focus groups to identify concerns, coupled with targeted interventions to overcome barriers to adoption.

Aligning AI adoption with measurable business outcomes has been challenging. For example, quantifying the benefits that NorPine will realize from implementing the AI-powered application is hindered because many of the processes will be new. Because the measures are new, they will be tracked closely and adjusted after go-live as needed. While improved CSAT scores, efficiency gains and compliance adherence can be tracked and should be expected, isolating AI's direct contribution from other digital transformation efforts will require robust tracking mechanisms.

Current Status Summary:

- Leadership has agreed on new key performance indicators (KPIs) that will measure customer engagement, compliance adherence, response time improvements and employee AI adoption rates.
- The primary sponsor has oversight of the CSO but is sponsoring six other major initiatives.
- A sponsor coalition map shows not all leaders have bought into AI.
- Access to the primary sponsor is not adequate.
- Mixed reactions to AI adoption have emerged from the early engagement sessions.
- Concerns range from job security and role clarity to trust in AI-driven recommendations.
- Targeted communications to address these concerns are well underway.
- Managers have received training on the value of AI; however, some managers are hesitant about how to position AI to their teams.
- Early capability assessments indicate knowledge gaps in AI literacy and prompt engineering skills.
- A formal change agent network has been set up with representatives from all CSO teams and with varying degrees of AI literacy.

Day 2

Prosci Practitioner Program AI
Adoption Focused Case Study

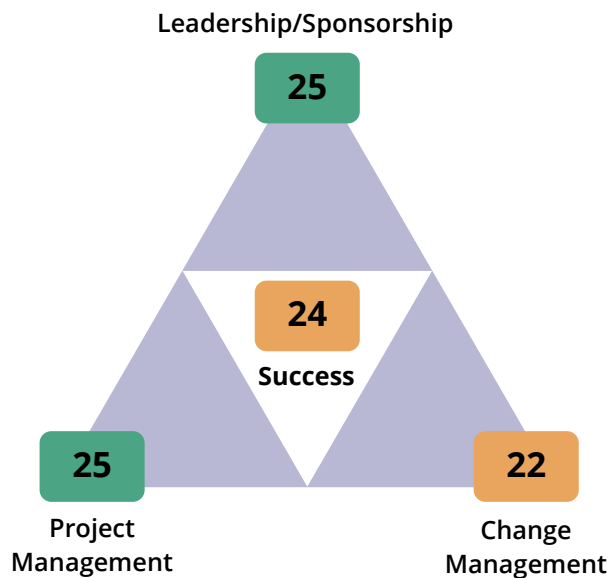

Prosci[®]

Phase 2 – Manage Change

After completing and obtaining sponsor approval of the NorAI change management strategy, you turn your attention to Phase 2 – Manage Change of the Prosci methodology. You focused on developing and supporting the execution of the change management plans needed to drive adoption and usage of the new AI-powered application. You engaged the sponsor, project team and representatives from the impacted groups to create an ADKAR Blueprint. You also created the four core plans: two role-based plans (Sponsor and People Manager) and two activity-based plans (Communication and Training). You then supported the execution of these four plans. Prior to beginning training for people managers and employees, you conducted a second PCT Assessment and reported on the progress executing the change management plans.

PCT and Change Management Assessment Results: Prior to Delivering Training

ADKAR Blueprint	On target
Sponsor Plan	On target
People Manager Plan	Behind target
Communications Plan	On target
Training Plan	On target

- 10-19: High risk/threat – needs immediate action
- 20-24: Alert/possible risk – needs further investigation
- 25-30: Strength – should be leveraged and maintained

NorPine Bank: AI Adoption

Case Study – Part 1

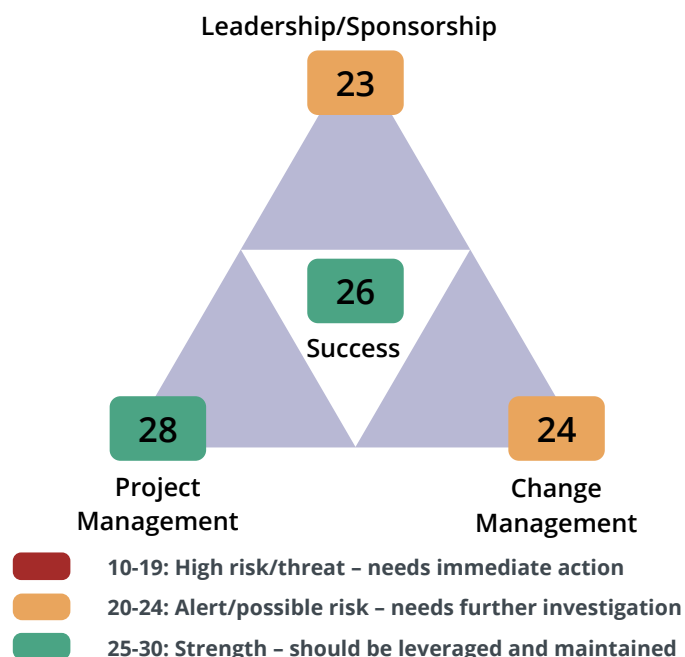

Phase 2 – Manage Change: Observations Prior to Delivering Training

- Client Services department managers were exhibiting resistant behaviors which increased project risk. The resistance resulted in the People Manager Plan falling behind schedule, as you had difficulty engaging this critical target audience.
- A vision and deep understanding of the AI-powered tool, its capabilities and benefits are needed at every level within the organization to shift culture and mindset to working in this new way.
- The primary sponsor showed renewed interest in prioritizing this project and demonstrated her own use of the AI-powered application at a town hall.
- Gathering AI-enthusiasts and those less literate to participate in the change agent network was overwhelmingly positive. A waitlist for participation is being considered.
- Prior to delivering training for the new AI-powered application, the ADKAR survey indicated that Awareness was high across all impacted groups, but Desire remained a barrier point for most.
- A key concern is the need for significant “on the job” learning for already busy and short-staffed teams.

The first ‘go-live’ milestone for the two locations is about to occur. You have conducted multiple Prosci Change Triangle Assessments, and the most recent results are shown below. You have repeated the ADKAR Assessment and have been actively tracking change progress to plan.

PCT and Change Management Assessment Results: Prior to First Go-Live Milestone

ADKAR Blueprint	On target
Sponsor Plan	Behind target
People Manager Plan	On target
Communications Plan	On target
Training Plan	Behind target

NorPine Bank: AI Adoption

Case Study – Part 1

ADKAR Assessment Results: Prior to First Go-Live Milestone

Group Impact Inventory						
Impacted Groups (CSO):	Number in Group	Anticipated ADKAR				
		A	D	K	A	R
Toronto – Frontline Support	600	4	3	3	3	2
Toronto – Contact Centers	600	4	2	3	3	1
Toronto – Wealth Services	400	5	4	4	3	1
Toronto – Commercial Banking	400	4	5	3	3	2
Toronto – Private Banking	250	5	4	3	3	3
Toronto – Customer Experience	250	4	2	3	3	2
Singapore – Frontline Support	150	4	3	2	1	1
Singapore – Contact Centers	150	4	3	2	2	1
Singapore – Wealth Services	50	5	4	3	3	2
Singapore – Commercial Banking	50	5	4	4	4	3

Phase 2 – Manage Change:

Observations Prior to First Go-Live Milestone

- The PCT score for sponsorship has decreased as the sponsor has been unable to fulfill some of the key activities in the sponsor plan due to competing demands for her time to sponsor other projects.
- The most recent ADKAR survey indicates that Desire continues to be a barrier point for three groups in Toronto and two groups in Singapore.
- Early hands-on training was delivered for managers to introduce the AI-powered application, but more than half of the managers did not attend training.
- Frontline Support (Branch and Teller Operations) in Toronto and Singapore have high Awareness, but low Desire. There are concerns about AI replacing tasks and less personal customer experience.
- Contact Centers (Phone and Digital) in Toronto and Singapore have Awareness of how AI can enhance their customer responses and lower hold times, but concerns remain about finding time to learn how to use the new application.
- Wealth Services in Toronto and Singapore have Desire, but limited AI use cases for complex customer interactions have caused a barrier at Knowledge for Singapore Wealth Services.
- Cultural differences between Canada and Singapore indicate an increased need to consider cultural implications in sponsorship, communication style and people manager engagement. Prompts that drive AI results can vary depending on the employee's locale and terminology.
- Post-transition proficiency metrics are still being finalized. Employees are wondering what 'Ability' looks like for them in the future state.

NorPine Bank: AI Adoption

Case Study – Part 1

- The project manager has extended the timeframe for the project into Phase 3 – Sustain Outcomes and has secured resources.
- NorAI is one of the many change initiatives being implemented at NorPine Bank. Employees are feeling change saturated.

Adapt Actions

At this point in applying Phase 2 – Manage Change, you need to consider the implications of the most recent assessment results and your associated observations, and answer the key question: “What adjustments do we need to make?”

Challenging Scenarios

Refer to the following topics in Prosci’s *Best Practices in Change Management Excerpt* to identify findings for addressing the challenging scenarios in the case study:

Sponsor saturation – Chapter 10

Resistant people managers – Chapter 11

Optimizing a change agent network – Chapter 12

Cultural awareness – Chapter 15

Change saturation – Chapter 19

Others you identify

Notes

Day 3

Prosci Practitioner Program AI
Adoption Focused Case Study

Prosci[®]

NorPine Bank: AI Adoption

Case Study – Debrief

NorPine recently launched an initiative to deploy an AI-powered application to improve customer experience and operations within the Client Services Organization starting with six impacted groups within their Toronto headquarters and four impacted groups within their Singapore office. Then after a one-month pause, deployment will be initiated in London, New York and Seattle.

The case study will enable you to begin thinking about how to apply the Prosci Methodology to your project when you get to this point in the project lifecycle.

Utilize Best Practices to Adapt Actions

1. Individually, reflect on the challenging scenarios in the NorPine case study.
2. In your small group, read and discuss the related section in the *Best Practices in Change Management Excerpt*.
3. Identify and record three tactics to address your NorPine case study challenge.
4. Share your tactics with the large group.
5. How could you use Prosci's *Best Practices in Change Management Excerpt* to assist in addressing the challenges you will face on your project?

Challenging Scenarios with Chapter References

Refer to the following topics in *Prosci's Best Practices in Change Management* to identify findings for addressing the challenging scenarios in the case study:

Sponsor saturation – Chapter 10

Resistant people managers – Chapter 11

Optimizing a change agent network – Chapter 12

Cultural awareness – Chapter 15

Change saturation – Chapter 19

Others you identify

Tactics:

NorPine Bank: AI Adoption

Case Study – Part 2

Read the assigned scenario about resistance to change.

Scenario #1: Stephen Graff

Stephen has been with NorPine's Frontline Support (Branch and Teller Operations) unit in Toronto for 18 years, rising from teller to Senior Customer Support Specialist Manager. He is known for his deep institutional knowledge, strong customer relationships and mentorship of new hires. Stephen prides himself on providing high-touch, personalized service, believing that real relationships—not automation—drive customer loyalty.

However, growing workloads, rising customer expectations and staff turnover have made his job more stressful. He often feels like he is just getting through the day, rather than delivering the level of service he values.

Stephen attended NorAI project briefings, where leadership positioned AI as a tool to enhance efficiency and improve customer experience. While he understood the benefits in theory, he remained skeptical, doubting AI's ability to maintain the personal touch he believes is essential.

As the change progressed, Stephen's skepticism turned into passive resistance. He completed the required training but remained disengaged, openly questioning AI's reliability. "Customers don't want a machine telling them what they need," he frequently stated. Instead of leveraging AI-powered recommendations, he continued relying on manual processes and encouraged his team to do the same.

With his team looking to him for guidance, Stephen's reluctance threatens adoption. Recognizing his influence, his manager has scheduled a one-on-one conversation to address his concerns and explore how AI could complement, rather than replace, his expertise. They have come to you as the change practitioner for guidance on getting him on board.

Scenario #2: Skye Lim

Skye is a Digital Support Specialist in NorPine's Phone Contact Center unit in Singapore. Having joined the company just under a year ago, she is still considered a new team member. With a degree in digital communication, Skye was excited about NorPine's focus on innovation, viewing it as an ideal place to launch her career.

Enthusiastic about technology, Skye enjoys developing customer engagement strategies through NorPine's digital banking platforms. She thrives on collaboration and seeks opportunities for career growth but is still building her credibility within the organization.

When the NorAI initiative was announced, Skye felt a mix of curiosity and excitement, but she lacked a clear understanding of the reasons for the change and its specific goals. Although she attended town halls and early AI learning sessions, details about how AI would be implemented and the risks of not adopting remained vague.

As she participated in training and hands-on testing, her initial optimism shifted to uncertainty. She was surprised by the level of AI oversight required, which limited her ability to craft personalized responses. Skye began to feel anxious about how AI might dictate workflows and impact her role.

While she hasn't outright rejected the AI-powered application, Skye's discomfort with the lack of clarity makes her hesitant to engage fully. Skye connected with a representative from the change agent network, who reached out to you as the change practitioner for NorAI, to seek advice before meeting with her.

NorPine Bank: AI Adoption

Case Study – Part 2

Scenario #3: Miguel Tremblay

Miguel has been with NorPine for over eight years, known for his deep product knowledge and strong client relationships within the Wealth Services team. He takes pride in delivering accurate and reliable information and consistently meeting client needs with his expertise.

When NorPine introduced its new AI-powered application, Miguel was initially excited about the potential for quick data retrieval and automated summaries. He envisioned how this technology could streamline his workflow and enhance his client interactions. With extensive training on the AI system, Miguel feels confident in his ability to leverage its functionalities effectively.

However, his enthusiasm quickly faded as he encountered inconsistencies in the AI-provided information. On multiple occasions, the AI-generated summaries of client transactions did not fully align with the data in the core banking system.

During one particularly challenging interaction with a high-net-worth client, AI suggested an explanation that contradicted Miguel's understanding of NorPine's policies. Concerned about the accuracy of the AI's output, he reverted to his manual process, spending extra time verifying the information through traditional systems. This not only delayed his response but also frustrated the client, who became increasingly impatient.

As Miguel grappled with these issues, his initial excitement gave way to doubt and frustration. He began to question the reliability of AI, especially when he saw some colleagues relying on AI outputs without double-checking their accuracy. He feels anxious about potential misinformation spreading when his team members are blindly trusting the output from AI, making him hesitant to engage with the new application.

Miguel's manager is concerned with his sudden distrust of the AI-powered application. The manager knows he needs to speak with Miguel to address his resistance. He has come to you, the change practitioner, for support.

Respond to Resistance

1. Individually, reflect on the resistance scenarios in the NorPine case study.
2. With your small group, review your assigned resistance scenario.
3. For that resistance scenario:
 - Name the resistant behavior
 - Identify the barrier point
 - Determine the root cause
 - Identify three tactics, in sequence, to respond to the resistance
4. Record on the following page.

NorPine Bank: AI Adoption

Respond to Resistance

Scenario	
Resistant Behavior	
Barrier Point	
Root Cause	
Tactics to Respond to Resistance	Tactic 1:
	Tactic 2:
	Tactic 3:

NorPine Bank: AI Adoption

Case Study – Part 3

Activate Sustainment:

What is needed to ensure the change sticks?

1. Review Part 3 of the NorPine case study on Sustain Outcomes, paying particular attention to the gaps, goals and actions taken.
2. Identify one additional sustainment action. Select the action that you feel is most powerful and could work in your organization.

Phase 3 – Sustain Outcomes

The AI-powered application has been launched in the CSO in Toronto and Singapore. Adoption levels have varied across business units. While some have fully integrated the AI-powered application into their workflows, others continue to rely on manual processes. One of the biggest challenges has been maintaining executive sponsorship. The primary sponsor was highly involved in the initial deployment phase but has since been pulled into other strategic initiatives. With her focus shifting away from NorAI, visible sponsorship and leadership reinforcement have declined. Momentum has come to a near standstill.

Additionally, managers in Wealth Services and Customer Experience have expressed concerns about AI consistency, particularly in customer interactions and risk assessments. Some employees are actively engaging with AI-driven insights, while others remain hesitant, requiring continued training, reinforcement and monitoring. Some employees are working harder to prove to the company that humans are better than AI.

Gaps to Address

- Declining sponsor engagement: The primary sponsor has shifted focus, and there is no strong secondary leadership figure driving ongoing AI adoption.
- Inconsistent AI usage across teams: Some employees have embraced AI, while others use it sporadically or avoid it altogether.
- Lack of Reinforcement and post go-live training: Employees who initially engaged in training need refresher practice sessions to deepen AI adoption and to learn more about the specific skills for creating prompts that generate the right AI outputs.
- People Manager involvement lagging: Managers are not consistently reinforcing AI adoption, and some still lack confidence in how to lead their teams through AI-driven changes.
- Trust in AI remains a concern: Particularly for the frontline, employees question AI's accuracy and decision-making transparency, which is slowing full adoption.
- New “pockets” of manager and leader resistance: Some managers and leaders have struggled to find the time to develop the new skills and proficiencies to use the new AI-powered application to its full potential.
- Resistance to AI-driven performance metrics: Some business units feel that AI is dictating KPIs without fully accounting for human expertise, leading to pushback against AI-generated recommendations.

NorPine Bank: AI Adoption

Case Study – Part 3

Goals and Priorities for Sustainment

Reinvigorate Sponsorship and Leadership

- Identify a new sustaining sponsor or sponsor coalition to continue reinforcing AI adoption.
- Engage NorPine's executive team in periodic updates on AI usage metrics and success stories.

Standardize AI Usage Across Business Units

- Set clear expectations on AI integration in daily workflows.
- Launch peer-led AI adoption sessions to promote cross-team learning and success-sharing (an extension of the change agent network).

Enhance Post Go-Live Support and Training

- Develop persona and use case guides with step-by-step prompts to share with each team, with terminology localization per region.
- Conduct quarterly regional hack-a-thons where people come and practice prompting with a showcase and prizes.
- Create a continuous learning model for employees including quarterly AI refresher training.
- Provide one-on-one coaching for employees struggling to integrate AI into their daily tasks.
- Drive new, daily change agent network tips and tricks and assign adoption activities amongst each team.
- Conduct weekly Lunch and Learns led by change agent network members in each location.
- Celebrate real-world wins at every town hall and tell each story with specific details and benefits for the employee, customer and company.

Increase People Manager Involvement

- Equip managers with reinforcement strategies to keep their teams engaged and share success stories.
- Establish AI adoption metrics as part of their leadership KPIs.

Address AI Trust and Transparency Concerns

- Improve explainability of AI-generated recommendations, particularly in compliance-related decisions.
- Establish an AI oversight committee to evaluate fairness, accuracy and regulatory alignment.

Refine AI-Driven Performance Metrics

- Adjust AI performance indicators to ensure a balance between automation and human expertise.
- Collect ongoing feedback from employees and customers on AI-driven interactions and show feedback is being considered and actioned (when possible).

NorPine Bank: AI Adoption

Case Study – Part 3

Additional Activities, Role Transitions and Outcomes

The change management team stayed engaged for 60 days beyond the initial implementation to ensure adoption and usage had stabilized. During this time, there were some additional activities and role transitions.

Leadership Adjustments and Role Transitions

- New AI Advocate roles: Select AI Champions within each business unit to serve as liaisons between teams and leadership.
- Sponsorship shift: Transfer sponsorship responsibilities to a combination of senior managers and an AI adoption task force.

Sustaining AI Training and Support

- Develop AI proficiency benchmarks to assess employee competency in using AI tools.
- Create an AI troubleshooting and optimization team to address employee concerns in real-time.

Embedding AI into NorPine's Culture

- Recognize and reward top AI adopters through internal awards and incentives.
- Launch a long-term AI learning track, including AI career development opportunities for employees.

Continuous Monitoring and Optimization

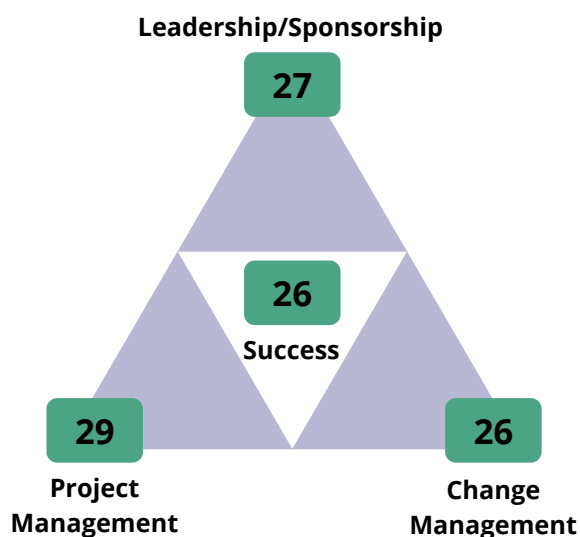

- Conduct ongoing AI usage analytics to track adoption patterns and identify problem areas.
- Establish a feedback mechanism where employees can report AI issues and suggest improvements.

NorPine Bank: AI Adoption Case Study – Part 3

Sustainment Action:

NorPine Bank: AI Adoption is a fictional organization used by Prosci as a sample company. It is used for illustrative purposes as a composite of many projects and clients. All scenarios, people and roles represented are fictitious. Each was created to describe typical challenges faced when managing change and the decisions and actions that could be taken to address them. All example outputs leverage best practice research consistent with the Prosci Methodology.
